DETAILED ACTION

1. This office action is in response to the application filed 31 December 2003, in which claims 1-3 were presented.

Claim Rejections - 35 USC § 102

2. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(a) the invention was known or used by others in this country, or patented or described in a printed publication in this or a foreign country, before the invention thereof by the applicant for a patent.

Claims 1-3 are rejected under 35 U.S.C. 102(a) as being anticipated by Cho, US 6,950,736.

(Claim 1) Cho discloses a control method for an automatic transmission, comprising: determining whether an engine is operating (column 3, lines 10-22); checking a shift range selection state when the engine is in a normal operation (column 4, lines 6-10); determining whether operating elements that commonly operate at N, D and R ranges are operating when said shift range is in N or D range, or in the midst of N-D change (column 4, lines 6-10); calculating an inspection speed by multiplying an output axle speed of the automatic transmission by a reversing gear ratio when said common operating elements are operating (column 4, lines 17-36); determining whether a difference between an input axle speed of the automatic transmission and the inspection speed is within a predetermined range for a prescribed period of time (column 4, lines 17-36); and stopping operation of the common operating elements

when it is determined that a vehicle is reversing as a result of the determination in the previous step (column 5, lines 35-47).

(Claim 2) Cho further discloses wherein the range checking step comprises: ascertaining whether said shift range is in N range or D range; and ascertaining whether said shift range is in the midst of N-D change control (column 1, lines 51-64).

(Claim 3) Cho further discloses wherein a step of determining whether the vehicle is running at a predetermined speed between the operation element checking step and the inspection speed calculating step, and carrying out the inspection speed calculating step if the vehicle speed is within a predetermined speed (column 5, lines 10-25).

Conclusion

3. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Christine M. Behncke whose telephone number is (571) 272-8103. The examiner can normally be reached on Monday - Friday 8:30 AM - 5:30 PM.
